Application: Technical Program Manager, Natural Language Understanding

Dear Sir/Madam,

In your position I am particularly interested in the opportunities to put my experience to the test. I also enjoy working on complex tasks, as this allows me to gain a lot of new experience and knowledge.

My balance, knowledge of human nature and reliability allow me to work well with any team.

So as a former Voice Design NLU-Development Team Member and Senior Language Expert I have gained experience in Computer Language Localization in German, automatic speech recognition, software testing and training, data collection and data processing, as Product Owner for the integration of different Apps and extension of the chatbot in our language assistant.

The further development of the speech recognition software is done in agile Scrum Project Management with Jira. The Scrum training was also organized by me for all colleagues.

Due to my experience, I can perform certain IT service requirements. My diligence and thoroughness enable me to solve problems quickly. As a result, your customers and stakeholders will always be satisfied with your service.

My knowledge of industry standard software (MS Office and others) and learning Python as programming language enables me to work flexibly.

My good knowledge of written English, German and Spanish enables me to understand new software.

I am looking for new requirements and am striving for a permanent position.

Therefore, I am looking forward for an invitation to a personal interview.

My salary expectation is 65.000 EUR gross per year and could start immediately after your promise.

On request, I will be happy to send you further documents. If you have any further questions, please do not hesitate to contact me.

Best regards,

Miguel A. Jiménez R.
